INTRODUCTION

IMMERSIVE LEARNING WITH MIXED REALITY

Immersive technologies are central to simulation-based education at MMU. Tools like Virtual Reality (VR), and Mixed Reality (MR) apps are used in such as the CAVE immersive room, practical simulation rooms, and VR Headsets to replicate real-world scenarios in safe, interactive ways

◆ Virtual Reality (VR)

- Fully immersive 3D environments using headsets
- Used in the **CAVE** to simulate complex scenarios (e.g., climate displacement, hospital wards)
- Supports individual and group learning
- Enhances empathy and decision-making in high-risk simulations

◆ Mixed Reality (MR)

- Combines virtual and real world objects
- Enables learners to manipulate virtual objects in real space
- Supports collaborative learning and scenario-based training

THE CAVE

Inside the CAVE: Your Guide to Immersive Learning at MMU

Located at BR G.89 in the Brooks Building at MMU, the CAVE is an immersive, interactive learning space featuring:

- Three touch-sensitive walls and a floor projection system
- 360-degree sight and sound
- Realistic simulations of environments such as homes, hospitals, schools, flood zones, and stadiums

Disciplines Using the CAVE

- Health Professions
- Education
- Social Care
- Art
- Sociology
- Future Media

CAVE Support

If your issue is not immediate, consulting our support documents might provide helpful information.

[CAVE - Standard Operating Procedure 2025.08.58.docx](#)

Brooks Resource Centre Support

The CAVE is directly managed by Technical Officers Gareth Preston and Joshua Simpson from the Brooks Resource Centre.

If immediate support is required, the CAVE Technical Officers can be reached through calling the Brooks Resource Centre on 0161 247 2544

Gener8 Support

Please reach out to the Brooks Resource Centre first for troubleshooting assistance, alternatively Gener8 who supply the CAVE can provide remote assistance.

CAVE Remote Support - Andrew, Gener8 IT: **0790 720 0277**

General Support - Gener8 Healthcare: **0161 694 5888**

Troubleshooting advice

If the cursor does not respond or moves erratically, or the picture flickers or judders, it could be caused by 'ghosting' where the touch sensors are receiving phantom clicks or gestures. You can fix this by pressing **Ctrl + G** on the keyboard, which resets the background by telling the program to ignore where it is currently detecting a touch.

If there is no sound, check that the sound is turned on by pressing the power button on the white panel underneath the PC. If that does not work, check that the PC is not muted.

CAVE Experiences A to Z

Apart from **Aquarium**, **Fairground Games** and **Whiteboard**, to start a CAVE experience, double click the Intuiface Player icon on the desktop to open it and select the experience from the menu. Most MMU experiences will be under the **My Experiences** tab but the Gener8 created ones will be under the **Shared with Me** tab.

Intuiface Player menu

3 Porter's Five Forces

Demo

Created by Dr Ilze Mertena

System: Intuiface

CATEGORY

Strategic Business Analysis /
Industry Evaluation

Include Estimated Time:

Active Participant:

LOCATION

DESCRIPTION

This interactive simulation introduces learners to **Porter's Five Forces**, a foundational framework for analyzing industry structure and profitability. Through four engaging activities—including case studies from the **Global Aviation Industry** and the **Hospitality and Tourism Industry**—participants will explore how competitive forces shape strategic decisions. The experience is designed to deepen understanding by applying theory to real-world sectors, encouraging learners to evaluate threats, opportunities, and strategic responses.

Learning Objectives

Learners will be able to:

- Identify and explain the five forces in Porter's model.
- Assess how each force affects industry profitability and competition.
- Apply strategic thinking to evaluate real-world business scenarios.
- Analyze the impact of external forces on firm strategy and positioning.
- Develop insights into how firms can respond to competitive pressures.
- Compare and contrast industry dynamics across hospitality, tourism, and other sectors.
- Develop strategic recommendations based on industry-specific competitive forces.

We'd love to hear your thoughts.

Aquarium

Three underwater scenes: Boat Ruins and Reef
Created by Gener8

CATEGORY	Emotional Regulation, Sensory Engagement, Neurodiversity Support, Physical Interaction	System: Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\aquarium	
DESCRIPTION	Participants enter a vivid underwater world featuring three distinct environments: a sunken boat, ancient ruins, and a vibrant reef. Each scene evolves through three dynamic states with bubbles provided when wall are touched: In the Calm phase, marine life moves gently in the background. Fish drift peacefully around the boat and reef, while a dolphin glides near the ruins, creating a serene and contemplative atmosphere. The Busy phase introduces more movement and energy. Fish swim faster and more actively, filling the space with life and motion. The reef becomes lively, the ruins feel more inhabited, and the boat scene pulses with underwater activity. During the Event phase, subtle but impactful changes occur. A whale passes through the boat scene, adding mystery. In the ruins, dolphins dart across the scene. Above the reef, a fishing boat putters by.	

Learning Objectives

Learners will be able to:

- **Practice self-regulation techniques** (e.g., deep breathing, grounding) in response to calm, busy, and eventful underwater scenes.
- **Identify personal stress signals** and apply strategies to return to a calm state.
- An entertaining demonstration of the cave.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Fairground Games

Games designed to help Parkinsons' patients to exercise

Created by

CATEGORY	Rehabilitation, Physical Activity, Neurodiversity Support	System: NAIM Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\Desktop\NAIM Funfair.lnk"	
DESCRIPTION	This interactive experience features six fairground-themed games, each with four difficulty levels, designed to support physical movement and coordination for individuals with Parkinson’s. Set in a funfair-style environment, the games encourage balance, stepping, reaching, and reaction through playful tasks: Bottle Balance – Stand still to keep a bottle upright; lean gently to correct its tilt. Coconut Drop – Step forward when coconuts fall to activate hammers and smash them. Disk Drop – Aim and drop disks into holes to improve hand-eye coordination. Simon Says – Follow movement instructions to build focus and response time. Hook-a-Duck – Pick up ducks and drop them into buckets to practice grip and release. Whack-a-Mole – Touch the wall to hit moles as they pop out, improving reaction speed. Emotional Tone: Playful, encouraging, and supportive. Skills Involved: Balance, coordination, reaction time, cognitive focus, emotional engagement.	
Learning Objectives		
Learners will be able to:		

- Assess physical and emotional condition using observational and interactive feedback.
- Demonstrate safe movement techniques tailored to individual ability levels.
- Apply communication strategies to support and encourage participants.
- Reflect on emotional impact of movement-based therapy through structured debriefing.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Forest Clearing

Demo of a Unity 3D model inside the CAVE.

Created by Gareth Preston

CATEGORY	Digital Creativity, Environmental Storytelling, Unity Demonstration, Simulation Design	System: Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Unity-ForestClearing.lnk"	
DESCRIPTION	Using simple keyboard controls (W, A, S, D), users can move freely through a lush forest landscape, surrounded by towering trees and glimpses of distant mountains that hint at adventure beyond the horizon. The environment wraps around you in 360 degrees, creating a sense of presence that feels real and alive. Whether you're wandering forward or glancing side to side, the scene responds naturally, making exploration intuitive and engaging. Built to showcase interactive design and spatial storytelling, this demo invites curiosity and encourages users to discover the forest at their own pace. It's a calm, immersive space that blends nature, technology, and creativity—all in one experience.	
Learning Objectives		
Learners will be able to:		
Navigate a 3D forest environment using standard movement controls (W, A, S, D) within a CAVE immersive system.		

- Recognise how environmental design elements (like lighting, terrain, and background assets) contribute to immersion.
- Reflect on the role of immersive technology in storytelling, simulation, and digital creativity.
- A demonstration on how Unity can be used to create an environment.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Hospital Ward

Demo of a Unity 3D model inside the CAVE.

Created by Gareth Preston

CATEGORY	Immersive Healthcare Simulation / Unity 3D Training	System: Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\AppData\Roaming\Microsoft\Windows\Start Menu\Programs\Hospital Ward.lnk"	
DESCRIPTION	Step into 360 Hospital Ward, a fully explorable Unity 3D simulation designed for the immersive CAVE environment. This isn’t just a visual—it’s a walkable, life-sized ward experience. users can move freely through a realistic hospital setting, navigating between beds, equipment, and clinical spaces. It is intended as a template onto which more specific scenarios can be built. Two human-sized robot is placed within the scene to provide a clear sense of scale, helping users understand spatial relationships and the physical layout of the ward. The environment is designed to support immersive learning, offering a safe and engaging space to explore healthcare settings and clinical workflows. Whether you're preparing for a placement, studying healthcare design, or exploring simulation-based learning, this experience brings the hospital ward to life—no scrubs required, unless you want it too	
Learning Objectives		
Learners will be able to: • Identify key features of a hospital ward, including bed placement, equipment zones, and staff movement areas. • Reflect on how immersive simulations can support healthcare education, safety training, and design thinking. • Build confidence in using Unity 3D to create realistic, interactive environments for simulation-based learning.		

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Alicia Darling

Decompression Sickness

A scuba diver presents to A&E with chest pain, shortness of breath, and hypothermia following a deep-sea dive.

Created by Liam Bagley

CATEGORY	Emergency Response, Clinical Assessment, Safeguarding, Manual Handling	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\Alicia Darling - Decompression Sickness	
DESCRIPTION	Miles, a patient in his mid-30s, arrives at the Emergency Department following a scuba diving incident. He reports chest pain and shortness of breath that began shortly after surfacing. Learners are expected to assess his condition using the NEWS2 scoring system, interpret the clinical significance of his symptoms and timing, and determine appropriate next steps. The scenario challenges participants to consider dive-related complications, initiate timely investigations, and make decisions about escalation of care. If Miles’ condition deteriorates, learners must respond dynamically, reassess priorities, and adapt their management plan accordingly.	
Learning Objectives		
Learners will be able to:		
- Assess physical condition - Demonstrate safe manual handling techniques - Apply safeguarding principles and communicate effectively		

- Reflect on emotional impact through structured debriefing, focusing on teamwork, decision-making, and patient outcomes in high-stress scenarios.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Altitude Sickness

A high-altitude medical response simulation set in the Himalayas.

Created by Liam Bagley

CATEGORY	Expedition Medicine Emergency Response Team Coordination Manual Handling	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\Documents\IntuiFace\Liam Updated Altitude Sickness\Liam Updated Altitude Sickness.ifx"	
DESCRIPTION	This scenario places learners in a realistic workplace setting where a colleague, Ali, may be showing signs of physical or emotional distress. Learners are asked to observe, assess, and respond using clinical tools and professional judgment. The simulation blends health monitoring with interpersonal awareness, encouraging thoughtful action in a complex situation.	

Learning Objectives

Learners will be able to:

- Accurately calculate and interpret a NEWS2 score in a simulated environment
- Recognize signs of clinical deterioration and initiate appropriate escalation pathways
- Apply safeguarding principles when concerns are raised by colleagues
- Communicate effectively with team members and simulated patients
- Reflect on the emotional and ethical dimensions of workplace health monitoring

We'd love to hear your thoughts.

👉 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Anatomy Atlas

A visual and interactive overview of the human body's major systems and related health conditions.

Created by Gener8

CATEGORY	Expedition Medicine	System: Intuiface
	Emergency Response	Include Estimated Time:
	Team Coordination	Active Participant:
	Manual Handling	

LOCATION "C:\Users\Public\Intuiface\1-c19b853f-dabb\Anatomy Atlas.ifx"

DESCRIPTION This is a well-rounded, visually engaging presentation that explores the major systems of the human body. It covers the skeletal, muscular, cardiovascular, respiratory, nervous, and digestive systems, along with common pathologies associated with each. The presentation uses 3D visuals and animations to support understanding and make learning more interactive and accessible.

Learning Objectives

Learners will be able to:

- Identify and locate key parts of the human anatomy across major systems.
- Describe common pathologies and how they affect specific body systems.
- Apply safeguarding principles when discussing sensitive health-related topics.
- Reflect on the emotional impact of illness or injury through structured debriefing and discussion.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Basic Life Support

Scene in a ward with questions for students about what to do in a cardiac arrest incident

Created by Gareth Preston

CATEGORY	Expedition Medicine Emergency Response Team Coordination Manual Handling System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\Documents\IntuiFace\Basic Life Support Premiere\Basic Life Support Premiere.ifx"
DESCRIPTION	This scenario places learners in a simulated adult inpatient ward where a cardiac arrest occurs. Participants are asked a series of context-based questions to assess their understanding of Basic Life Support (BLS) procedures. The simulation tests both technical knowledge and decision-making under pressure, including how to initiate CPR, call for help, and coordinate with a team.
Learning Objectives Learners will be able to: • Accurately calculate and interpret a NEWS2 score in a simulated environment • Recognize signs of clinical deterioration and initiate appropriate escalation pathways • Apply safeguarding principles when concerns are raised by colleagues • Communicate effectively with team members and simulated patients • Reflect on the emotional and ethical dimensions of workplace health monitoring	
We'd love to hear your thoughts. https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink	

Beyond the Door: Easter

An escape room set in the Easter Bunny's Egg Factory

Created by Gener8

CATEGORY	Gamified Learning, Problem Solving, Teamwork, Narrative Simulation	System: Intuiface Include Estimated Time: 20 minutes Active Participant:
-----------------	---	---

LOCATION Shared with Me tab on Intuiface Player

DESCRIPTION A visit to the Easter Bunny's island quickly turns into an adventure when a storm hits.

- Solve the mystery of the rabbit statues
- Fix the fuse box and find the secret door
- Help make Easter Eggs with the machine
- Find the bad egg and escape

Type 3650 into the elevator keypad to start this escape room.

Learning Objectives

Learners will be able to:

- Learn to communicate with others to solve the puzzles.
- Practise thinking laterally.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Beyond the Door: Summer

A pirate themed escape room set around the treasure of Serpent Island.

Created by Gener8

CATEGORY	Gamified Learning, Problem Solving, Teamwork, Narrative Simulation	System: Intuiface Include Estimated Time: 20 minutes Active Participant:
LOCATION	Shared with Me tab on Intuiface Player	
DESCRIPTION	You find yourself on a pirate ship. Captain Salazar offers you a choice: stay and join his crew or walk the plank. If you stay, he sends you down below to work: • Clean the floor • Arrange the books alphabetically • Fire the cannon • Collect the six pieces of paper hidden around the room and assemble them into a message • On deck, use the telescope to find the hidden constellations If you leave, you find yourself on the seabed with a mermaid: • Swipe the bubbles and pop them to gain the ability to breathe underwater • Clear the seaweed with a sword • Help free Billy the skeleton pirate by solving a logic puzzle Either path, you will arrive at a beach with the Captain: • Use the compass to find the location of the treasure • Dig up the treasure by swiping away the sand • Solve the combination lock by finding the four symbols hidden in the beach scene • Claim the giant pearl and return home Type 2163 into the elevator keypad to start this escape room.	
Learning Objectives		
Learners will be able to:		
• Learn to communicate with others to solve the puzzles. • Practise thinking laterally.		
 https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

BLISS

Demo of ways the CAVE can help health education, including interactive rooms

Created by Gener8

CATEGORY	Health Education, Clinical Simulation, Medical History, Digital Learning, Interactive Technology	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\BLISS - 1080	
DESCRIPTION	Atlas Explore body systems from the senses to cardiology and integumentary. Includes immersive visuals and real medical images (e.g., X-rays, trauma cases). Interactive tools allow drawing, filtering, and theme changes. Assets Access real-world medical visuals such as: X-rays of skull fractures, Graphic trauma cases Tools for annotation and screen customization. Medical History Interactive timelines covering: The evolution of CPR mannequins and their pop culture connection Ignaz Semmelweis and the history of handwashing Clinical Case: MRA Patient with Type 2 Diabetes Access to patient records, ABCDE results Cardiac-sounding chest pain pathway exploration E-Learning	

Basic Life Support (BLS) training

Medical instruction modules

Simulation Environments

Elderly living room

Paediatric ward

NHS ambulance interior

Underwater environment with swimming fish

Web-Based Personas

Engage with virtual characters:

Lillan McKay

Mark Warlegan

Simmon Robbins

8. Video Content: under water environment

Learning Objectives

Learners will be able to:

- Explore and understand human body systems using immersive visual tools and real medical imagery.
- Analyze clinical cases through patient records, diagnostic pathways, and ABCDE assessments.
- Investigate the history of medicine through interactive timelines and historical narratives.
- Apply basic life support and clinical skills in simulated healthcare environments.
- Interact with web-based personas to enhance empathy, communication, and decision-making.
- Navigate and utilize CAVE technology and software for immersive medical education.
- Participate in structured escape room scenarios to develop problem-solving and teamwork skills.
- Engage with multimedia content including presentations and videos to reinforce learning.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Birley Place Police Incident Room

Office in a police station with the evidence for a murder case

Created by Gareth Preston

CATEGORY	Forensic Science Crime Scene Analysis	System: Intuiface Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\Birley Place	
DESCRIPTION	Set in a realistic office within a police station , this interactive simulation presents a murder case involving a woman found dead in her flat. Learners take on the role of investigators tasked with examining the scene, reading reports, collecting evidence, and piecing together the events leading to the incident.	
Learning Objectives Learners will be able to: • Identify and interpret physical and digital evidence. • The understand of how personal bias can affect a case. • Understand the process of crime scene documentation and analysis. • Collaborate in teams to develop investigative hypotheses. • Use interactive tools to explore and reconstruct the incident timeline.		
 We'd love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Cath Lab

A patient with heart trouble is brought into hospital and transferred to the cardiac catheterization laboratory.

Created by Dean Thomas

CATEGORY	Nursing	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\Birley Place	
DESCRIPTION	A cardiac scenario for a team of students. A middle-aged man with chest pains dials 999. Decide how the paramedics should treat him. After the man is taken to hospital, decide what tests should be carried out in ICU. Accompany him to the “cath lab”, observe camera footage of his chest and decide how best to treat him. When the situation becomes more serious, use CPR and a defibrillator to restore him to stability. Successfully monitor the inserting of a catheter. Please note this experience is designed to be used with a CPR manikin, bed and crash trolley.	

Learning Objectives

Learners will be able to:

- Put their medical knowledge to the test in a safe environment
- Learn about the work of the catheterization laboratory
- Practise basic life saving skills safely

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

CAVE Staff Training Session

Basic understanding of the cave

Created by Alastair Peat

CATEGORY	Immersive Technology Orientation, Staff Training, System Familiarisation	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\CA VE Staff Training Session	
DESCRIPTION	Step into the future of immersive learning with the CAVE Staff Simulation , a hands-on training experience designed to introduce staff to the powerful capabilities of the CAVE (Cave Automatic Virtual Environment) at Manchester Metropolitan University.	
Learning Objectives Learners will be able to: • Intro to CAVE • Usage of CAVE technology • Cave Software		
 We'd love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Designing Atmosphere

Demo

Created by Ilsa Mendez

CATEGORY

Spatial Experience Design /
Sensory Environments

System: Intuiiface

Include Estimated Time: 15-
20 min

Active Participant:

LOCATION

DESCRIPTION

the concept of **atmosphere** in designed environments, focusing on how emotional and sensory experiences are shaped by space.

Learners will engage with three key themes:

- **Theme 1: Interior Atmosphere** – examining how elements like lighting, materials, and layout influence mood within enclosed spaces.
- **Theme 2: Exterior Atmosphere** – exploring how outdoor environments evoke emotional responses through landscape, architecture, and public design.
- **Theme 3: Event Atmosphere** – analyzing how temporary or staged environments (e.g., festivals, exhibitions, ceremonies) create immersive emotional experiences through sound, crowd dynamics, and thematic design.

Through examples and reflective prompts, learners will gain insight into how atmosphere is intentionally crafted and perceived.

Learning Objectives

Learners will be able to:

- Define emotional and affective atmosphere in design contexts.
- Identify and compare interior, exterior, and event atmospheres using real-world examples.

- Analyze how design elements contribute to emotional flow and sensory engagement.
- Reflect on the role of atmosphere in shaping user experience and memory.
- Apply atmospheric design principles to evaluate or enhance environments across different settings.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Escape!

Two escape rooms: The Case of the Missing Diamonds and Dr Duck's Dilemma

Created by Gener8

CATEGORY	Gamified Learning, Problem Solving, Teamwork, Narrative Simulation	System: Intuiface Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\Escape Rooms - 5760 x 1080	
DESCRIPTION	These immersive puzzle adventures place players in two thrilling scenarios where observation, logic, and curiosity are key. Depending on the players, each game lasts 10-15 minutes. 1. Case of the Missing Diamonds You find yourself trapped in the suspect’s study. To escape, you must search the room and uncover clues by interacting with various objects. Each item may reveal part of the mystery behind the missing diamonds. 2. Dr Duck’s Dilemma Dr. Duck has sent you on a mission to retrieve his most precious belonging before he goes into surgery. You must explore the space, press different items, and solve puzzles to complete the task.	
Learning Objectives		
Learners will be able to:		
• Develop problem-solving and critical thinking skills in a timed scenario. • Practice observation and attention to detail through interactive clue discovery. • Enhance teamwork and communication while solving complex challenges. • Apply logical reasoning to progress through narrative-driven tasks.		

- Engage with immersive environments.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Fast-Fashion Takeover

Environmental education about the way some businesses “greenwash” their activity

Created by Myth, Sharon & Patrick

CATEGORY	Environment UXID Design	System: Intuiface Include Estimated Time: Active Participant:
LOCATION	D:\Archived Content\Intuiface\Sustainable	
DESCRIPTION	A shopping experience with a difference.	
	Visit the an online store which is promoting its ethical brand of clothing with soothing messages and information about its commitments to recycling and sustainability. Press the pictures of the model to learn more, whilst a video plays on the middle wall.	
	Soon it becomes clear that all is not as it seems. An environmentalist has hacked the site and keeps interrupting your visit with messages and mandatory mini games explaining the true impact of this brand. Eventually the whole display will break down.	
LEARNING OBJECTIVES	• Develop their critical thinking • Learn about the environmental harm that can be caused by “ethical” brands • Learn about in-store interactive front-end design	
 We’d love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Flooded Street

How to help the residents of a flooded street

Created by Gareth Preston & Margaret Struthers

Category	Safeguarding, Social Care, Emergency Planning, Environmental Awareness	System: IntuiFace Include Estimated Time: Active Participant:
location	C:\Users\mmu\Documents\IntuiFace\Flooded Street Case Scenario	
Description	The scenario unfolds in three parts: a video of a flooded street with tappable resident profiles, a view of an empty hall for evacuation planning, and a final scene showing environmental damage like damp flooring. Each stage prompts reflection on urgent needs, shelter coordination, and long-term impacts. A sudden six-inch flood hits a narrow residential street, quickly soaking homes and cutting off access to essentials. Affected residents include elderly individuals, families with young children, and working adults. Though shallow, the water causes panic, property damage, and disruption. Participants are asked to consider: • Who needs help first • How the community hall can support shelter and coordination • Environmental impacts like dampness and contamination.	

This scenario encourages practical thinking, empathy, and community-focused problem-solving.

Learning Objectives

Learners will be able to:

- Identify vulnerable groups and prioritize support based on need.
- Plan immediate actions to ensure safety and communication.
- Understand the role of community spaces like the local hall in emergency response.
- Assess environmental and health impacts of minor flooding.
- Reflect on emotional and social needs during a local crisis.

We'd love to hear your thoughts.

<https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Four Es (Updated)

Demo

Created by Ilsa Mendez

CATEGORY	Experience Economy / Customer Engagement	System: Intuiiface Include Estimated Time: Active Participant:
LOCATION	Experience Design / Customer Engagement	
DESCRIPTION	This interactive demo explores the Four Realms of an Experience: Entertainment, Education, Esthetics, and Escapism —and how they influence customer engagement and business value. Learners will reflect on key questions: Are customers spending more time with your brand? Is revenue derived solely from goods and services, or from experiences? Do you need to fight for attention, or does your experience generate demand on its own? Through immersive scenarios and examples, participants will discover how designing meaningful experiences can drive attention, loyalty, and profitability.	
Learning Objectives Learners will be able to: • Describe the Four Realms of an Experience and their characteristics. • Evaluate how each realm contributes to customer engagement and business growth. • Analyze the relationship between time, attention, and value in experience design. • Reflect on how businesses can evolve from selling products to offering compelling experiences. • Apply experience economy principles to assess or enhance customer interactions.		

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

From Bedroom to Cellroom

Knife Crime scenario, made in cooperation with UCan

Created by Gareth Preston

CATEGORY	Safeguarding, Youth Justice, Ethical Decision-Making, Communication Skills	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	C:\Users\mmu\Documents\IntuiFace\From Bedroom to Cellroom v3	
DESCRIPTION	The experience begins with a video introduction that sets the scene, followed by a short text overview and a “UCan Do It” section explaining what Ucan can offer, In this scenario, learners observe a situation involving two 15-year-olds, Josh and Sophie. Josh has recently become involved with a local gang and is known to sometimes hang around with Sophie. On a Monday morning, the two skip school. Josh attempts to shoplift from a store but flees the scene when confronted. Sophie remains outside the store, holding Josh’s bag, when the police arrive and begin questioning her. The simulation explores: • How police engage with young people • The emotional and social impact of police involvement • The importance of communication, safeguarding, and decision-making in youth justice contexts	
Learning Objectives		
Learners will be able to:		
• Understand the complexities of police interactions with young people.		

- Recognize the emotional and social effects of law enforcement involvement.
- Apply principles of safeguarding and youth engagement in real-time scenarios.
- Reflect on the role of communication and empathy in policing.
- Make informed decisions based on observation and ethical reasoning.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Health Professions – Motivational Interviewing

Created by Jasmine Hearn

CATEGORY	Communication Skills, Diagnosis, Healthcare	System: Intuiface Active Participant
LOCATION		
DESCRIPTION	A training experience about how to conduct a positive case history and treatment recommendation conversation with a client. Alex has come in to talk about his concern over his general health and his disturbed sleep. Through a series of multiple choice questions, find out more about the amount of alcohol he is consuming. Work with Alex to reach a mutual agreement about what to do next, and recognise statements and phrasing which sound judgemental or are likely to lead to a poor outcome.	
Learning Objectives Learners will be able to: • Understand the importance of using the right language with a client • Learn the importance of working with a client rather than simply instructing them • Make informed decisions based on observation and ethical reasoning.		
 We'd love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Health Care Scenario 1

– Pre-Op Check

Carry out a pre-op check on a patient due to undergo surgery

Created by Natasha Hadgraft

CATEGORY	Clinical Assessment, Emergency Response, Patient Safety	System: Intuiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	An ICU nurse asks the student(s) to perform a routine pre-op cardiac examination of a patient who is due to undergo a breast cancer operation. Use the patient’s information and her responses to carry out this examination correctly consensually. Carry out an ECG test, interpret the readout correctly and take action to correct the problem which appears. Handover to the ICU nurse	
Learning Objectives		
Learners will be able to:		
• Make informed decisions regarding patient management • Cope with a series of interactions. • Understand the importance of consent and keeping the patient informed. • How to use an ECG machine correctly • Good communication		

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Health Care Scenario 2

– Patient Diagnosis

Interview a patient and diagnose their condition

Created by Natasha Hadgraft

System: Intuiiface

CATEGORY

Clinical Assessment, Patient Safety

Include Estimated Time:

Active Participant:

LOCATION

DESCRIPTION

Working as a team, students must interview a patient to know their history, choose which tests to carry out and then conduct them correctly.

When they have the results, the students must correctly diagnose the patient's illness and decide on the correct treatment.

Learning Objectives

Learners will be able to:

- Interview a patient
- Make informed decisions regarding patient management
- Cope with a series of interactions
- Understand the importance of consent and keeping the patient informed
- Be aware of potential issues when conducting a spirometry test
- Good communication

We'd love to hear your thoughts.

Health Care Scenario

10 – Sleep Study

Review the results of a sleep study

Created by Natasha Hadgraft

CATEGORY	Clinical Assessment, Patient Safety	System: Intuiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	A patient with a suspected sleep disorder has returned their sleep study Working as a team, students must analyse the results and diagnose the patient. Then report back to her.	
Learning Objectives		
Learners will be able to:		
• Interpret sleep study statistics • Have knowledge of sleep disorder symptoms and treatments		
 We'd love to hear your thoughts.		
 https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Health Care Scenario

11 – Diagnosis

A patient complains of stinging pain in her right hand.

Created by Natasha Hadgraft

CATEGORY	Clinical Assessment, Patient Safety	System: Intuiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	A patient complains of stinging pain in her right hand. The students must interview her and choose the correct test (Pulse Oximetry). They then carry out two tests, taking care to explain what they are doing and reassuring the patient. Then they must recommend the correct treatment and report back.	
Learning Objectives Learners will be able to: • Correctly interview a new patient • Learn about Pulse Oximetry and how to perform it • Treating the pain		
 We'd love to hear your thoughts.		
 https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Introduction to Critical Care

Stabilise a patient in intensive care and calculate their NEWS
Created by Anna Kine

CATEGORY	Clinical Assessment, Emergency Response, Team Leadership, Patient Safety	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\Documents\IntuiFace\Anna Kime - ADV - Pre-Reg\Anna Kime - ADV - Pre-Reg.ifx"	
DESCRIPTION	You are needed in the Emergency Department (ED). You must appoint a team lead and divide your team into three groups, assigning each group to a specific zone: left, centre, and right. A 70-year-old male patient named Dave as been admitted to the ward. Your team is responsible for: Calculating the patient's NEWS2 score Performing a full clinical assessment Checking blood glucose levels Prescribing appropriate medications Ordering relevant diagnostic tests The medical registrar is on call. Finally deliver and affective handover.	
Learning Objectives		
Learners will be able to:		
• Demonstrate effective team leadership and delegation in an emergency setting • Apply the NEWS2 scoring system to assess patient acuity • Conduct a thorough clinical evaluation of a confused elderly patient • Perform and interpret a blood glucose test • Make appropriate prescribing decisions based on clinical findings • Select and request suitable diagnostic investigations • Communicate effectively with the on-call medical registrar • Make informed decisions regarding patient admission and management		

- Cope with a series of interactions.

We'd love to hear your thoughts.

JailCraft

Life inside a modern prison, from a visiting health professional's experience

Created by Josh Simpson

CATEGORY	Safeguarding, Professional Boundaries, Incident Management, Manual Handling, Wellbeing in Secure Environments System: Intuiface Include Estimated Time: Active Participant:
LOCATION	"C:\Users\Public\Intuiface\1-e2acef57-fed6\Jailcraft.ifx"
DESCRIPTION	<i>Prison Exposure Experience</i> is an interactive simulation designed for the CAVE immersive environment at Manchester Metropolitan University. This experience places learners in the role of a visiting health professional's experience, guiding them through a realistic, scenario-based journey from arrival to incident management. The simulation begins with outfit selection, followed by a first-person narrative from a female staff member describing her daily commute and reflections on the role. Learners are encouraged to engage in discussion prompts throughout, such as identifying inappropriate behaviour in the car park or evaluating the time it takes to secure a safety belt. As the journey continues, learners pass through biometric security, explore the visitor centre, and observe virtual courtroom procedures, including the use of security dogs and anti-drone technology. On the prison wing, users interact with realistic layouts, respond to prisoner questions, and learn how to manage incidents, rub-down searches, and separation cells. The experience concludes with an interactive room layout task, encouraging learners to apply what they've seen. Throughout, the simulation highlights the importance of wellbeing, professional boundaries, and the benefits of reflective practice in high-pressure environments.

Learning Objectives

Learners will be able to:

- Understand the daily routines and responsibilities of prison staff through immersive role-play.
- Identify appropriate and inappropriate behaviours in professional settings, including car parks, entrances, and shared spaces.
- Navigate key security procedures such as biometric checks, bag screening, and safety belt protocols.
- Recognise the role of technology in prison security, including drones, dogs, and surveillance systems.
- Respond appropriately to prisoner questions and manage incidents using de-escalation and safeguarding techniques.
- Understand the purpose and ethical considerations of separation cells and rub-down searches.
- Engage with interactive tasks to reinforce spatial awareness and procedural knowledge.
- Reflect on the importance of staff wellbeing, resilience, and the benefits of working in secure environments.

We'd love to hear your thoughts.

Lived Experience

A discussion about class in the United Kingdom

Created by

CATEGORY

**Social Behavior
Social Care / Social Work**

System: Intuiface

Include Estimated Time:

Active Participant:

LOCATION

DESCRIPTION

A visit to two different family homes. First knock on the door of detached house in the suburbs and enter the living room. Secondly visit a run-down apartment block and find the flat of a family.

In both cases the visitors are invited to examine their surroundings and infer what they can about the families and their social status.

Learning Objectives

Learners will be able to:

- Work on their observation skills
- Question their assumptions and biases.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Lost Garden

Imaginary future version of Manchester created by SODA students

Created by

CATEGORY	Speculative Design, Environmental Futures, Creative Technology, Ecological Storytelling	System: Intuiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	Welcome to <i>Future Fauna</i>, a speculative Unity 3D experience that explores how familiar creatures might evolve in response to environmental change, survival pressures, and technological influence. Set in a richly imagined future ecosystem, this immersive simulation invites users to observe and reflect on the adaptations of local species: Future Pigeon – Once a graceful flier of city skies, the pigeon now walks with purpose. Future Bee – No longer delicate, the bee has evolved into a larger, sturdier survivor. Curious about how nature might rewrite its own rules? Step into <i>Future Fauna</i> and meet the Future Moth, Future Frog, and more Each creature is presented in a 360° immersive environment, encouraging users to explore, observe, and question how evolution might respond to the challenges of tomorrow.	
Learning Objectives		
Learners will be able to:		
• Explore speculative evolution through interactive observation of reimagined species such as the Future Moth, Future Frog, and Future Hedgehog. • Understand how environmental pressures and technological change can influence biological adaptation and survival strategies.		

- Reflect on the relationship between nature and innovation, and how future ecosystems might evolve in response to human impact.
- Develop critical thinking skills by comparing present-day animal traits with their imagined future counterparts.
- Engage with creative storytelling and design thinking in a scientific context, blending imagination with ecological awareness.
- Consider ethical and ecological implications of future biodiversity and conservation efforts.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

MED Framework

Principles of commercial design

Created by Ilsa Mendez

CATEGORY	Themed Experience Design / Sensory Engagement	System: Intuiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	The MED Framework for designing immersive and emotionally resonant experiences. Learners will explore how a compelling theme can alter a guest’s sense of reality and time, and how harmonizing impressions across all sensory inputs enhances engagement. The experience guides participants through key design principles: defining a clear theme, creating a storyline, aligning impressions, eliminating intrusions, engaging the five senses, and incorporating memorabilia and emotional memory. Special attention is given to the role of staff as actors in shaping mood and atmosphere.	
Learning Objectives Learners will be able to: • Define and describe the MED Framework for experience design. • Create and articulate a compelling theme in three words. • Develop a storyline that supports immersive engagement. • Harmonize sensory impressions and eliminate negative elements. • Understand the role of atmosphere and emotional flow in experience design. • Recognize the importance of staff in delivering emotionally rich experiences.		

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Mental Health Quiz

Quiz about BSc Mental Health Nursing

Created by Josh Simpson

CATEGORY	Gamified Learning, Mental Health Education, Team-Based Simulation, Crisis Response	System: Intuiface Include Estimated Time: Active Participant:
LOCATION	Experiences By Me tab of Intuiface Player	
DESCRIPTION	This is a multiple choice quiz of 20 questions to induct first year student to the Mental Health Nursing degree, used as part of a building wide set of activities. if the participants get a question wrong they are sent back to the beginning. And it is against the clock. Fron 2026 a second version was implemented which dropped the introduction and updated the questions to focus on mental health instead of the MMU degree. This quiz template could be adapted for any subject.	
Learning Objectives Learners will be able to: • Collaborate effectively under time pressure to solve problems and make informed decisions. • Build resilience, communication, and leadership skills in a team-based immersive setting. • Engage with gamified learning to reinforce knowledge retention, adaptability, and critical thinking.		
 We'd love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Offending Pathways

Step into the realities of custody through two vulnerable individuals, navigating intake, support planning, and ethical dilemmas in a high-risk prison environment.

Created by Alistar Peat

CATEGORY	Trauma-Informed Practice Neurodiversity and Inclusion Sentencing and Ethics Safeguarding in Criminal Justice Complex Needs in Prison Settings	System: Intuiiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	Explore the complex realities of prison life through the stories of Mr A, a young man with a traumatic past and behavioural challenges, and Ms B, a woman with undiagnosed learning difficulties. This scenario highlights the importance of trauma-informed care, inclusive communication, and ethical decision-making in custodial environments.	
Learning Objectives Learners will be able to: - Identify and respond to the complex needs of individuals entering custody with trauma histories or cognitive impairments. - Apply trauma-informed and inclusive communication strategies during intake and assessment procedures. - Evaluate ethical considerations in sentencing and support planning for vulnerable individuals. - Demonstrate awareness of safeguarding responsibilities and multi-agency collaboration in custodial settings. - Reflect on how personal history and neurodiversity can influence behaviour, risk, and rehabilitation pathways.		

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Prison Visit

Created by Alistar Peat

CATEGORY

Justice System
Simulation / Empathy-
Based Learning

System: Intuiiface

Include Estimated Time:

Active Participant:

LOCATION

DESCRIPTION

This immersive demo invites learners to reflect on the emotional and environmental realities of prison visits. Through guided questions and interactive scenarios, participants explore the impact of prison cell conditions on prisoner wellbeing, the emotional complexity of discussing personal matters with family in a monitored space, and the role of staffing levels in shaping the overall experience. The simulation encourages empathy, critical thinking, and a deeper understanding of the human side of incarceration.

Learning Objectives

Learners will be able to:

- Evaluate how prison cell conditions affect prisoner mental and physical wellbeing.
- Reflect on the emotional challenges faced by prisoners during family visits.
- Analyze the influence of staffing levels on the quality and safety of prison interactions.
- Develop a compassionate understanding of the prison environment from multiple perspectives.
- Engage in thoughtful discussion about the ethical and operational considerations of prison management.

We'd love to hear your thoughts.

Physiotherapy

Placement Preparation

Training for a student about to start their first placement in your placement who should

Created by Gareth Preston

CATEGORY	Placement Readiness / Professional Practice	System: Intuiface Include Estimated Time: 30–45 minutes Active Participant:
LOCATION		
DESCRIPTION	This training prepares physiotherapy students for their first clinical placement. It covers: • Preparation • Professionalism • First day The students are presented with a short scenario involving an elderly patient and must answer multiply choose questions Students are encouraged to reflect on key questions like: • What are your responsibilities on placement? • What is the dress code and start time? • When can you act independently and when should you refer to coworkers	
Learning Objectives		
Learners will be able to:		
• Identify key contacts and communication methods before placement • Complete essential pre-placement activities and training • Demonstrate awareness of clinical expectations and protocols		

- Reflect on their readiness and role within the clinical team
- Learn how to navigate a typical patient interaction

We'd love to hear your thoughts.

Manual Handling - Proning

Training how to successfully move a patient in a prone position
Created by Ruth Wood & Casper Helliwell

CATEGORY	Placement Readiness / Professional Practice	System: Intuiface Include Estimated Time: 30–45 minutes Active Participant:
-----------------	--	--

LOCATION

DESCRIPTION

Manual handling training for the proning procedure combined with handling an incident in the ICU ward. This experience requires equipment to be present in the CAVE in order to be effective.

A patient with a challenging mixture of symptoms is brought into the ICU. The students taking part receive a handover from the doctor. After a short video from the patient's point of view, the students have to arrange the correct medication according to the patient's records.

They are then guided through the proning, carrying out the procedure on a CPR dummy.

Suddenly the patient has a medical emergency which the students must correctly deal with by answering multiple choice questions.

When they are successful, they will receive a video thank you message from the patient recorded 'a few days later'.

Learning Objectives

Learners will be able to:

- Learn the proning procedure
- Keeping calm during a patient life threatening incident
- Practice the correct ICU nursing procedure
- Learn how to navigate a typical patient interaction

We'd love to hear your thoughts.

<https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Psychology Quiz

Multiple choice quiz

Created by Gareth Preston

CATEGORY	Psychology / Professional Practice	System: Intuiiface Include Estimated Time: 15–20 minutes Active Participant: Yes (Up to 3 players)
LOCATION		
DESCRIPTION	This interactive quiz allows up to three participants to compete and test their knowledge of core psychology concepts. Questions include topics such as: <i>What is the regulatory body for health and care professions in the UK?</i> At the end each player receives a score at the end. This quiz is a good example of how to implement a multiple choose quiz on any subject.	
Learning Objectives		
• Identify key regulatory bodies and their roles • Apply ethical principles in psychological practice • Demonstrate foundational knowledge of psychological theories • Engage in reflective learning through competition		
 We'd love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

Relaxation Experience

Created by Gareth Preston

CATEGORY

Health, wellness

System: Intuiface

Include Estimated Time:

Active Participant:

LOCATION

DESCRIPTION

Three video based relaxation exercises to help people with feelings of stress and anxiety.

There is also an optional introduction about the condition of stress and how these exercises can help.

Learning Objectives

Learners will be able to:

- Learn relaxation/meditation techniques
- Understand their mind and body

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Sim in - Global

An introduction to the United Nation Community of Parties and environmental politics

Created by Ben Hall

CATEGORY

Sociology

System: IntuiFace

Include Estimated Time:
50 minutes

Active Participant: Class

LOCATION

DESCRIPTION

A beginner's guide to the United Nations' ongoing Community of Parties (COP) strategy for addressing environmental issues.

The class is led by several lecturers taking on the roles of UN delegates, including the unreliable Sir Kit Kat. Following an introductory video, there are three mini-games:

1. Identify the international influences in four pop songs from around the world, by moving the flags of regions into a list of slots.
2. A multiple-choice quiz about the COP.
3. By adjusting the size of figures representing six stakeholders in the environment, the class decides who is most responsible for the problems and the solutions.

The class is divided into three groups for the games, one for each wall.

Learning Objectives

Learners will be able to:

- Learn about what the COP conference is for and what happens there.
- The interconnectedness of the issues and the solutions in environmental politics.

We'd love to hear your thoughts.

 <https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink>

Sim in Crim – Policing

 Manchester Metropolitan University	Content Description This simulation depicts the policing procedure from arrest to interrogation. Some real-world examples used may be distressing, speak to your tutor if you have any concerns. With contributions from Casper Helliwell	Sim in Crim - Policing By Ben Hall 	Press here to start
--	---	---	----------------------------

Understanding the UK arrest procedure

Created by Casper Helliwell & Dr Ben Hall

CATEGORY

Criminology, social work

System: Intuiface

Include Estimated Time:

Active Participant:

LOCATION

DESCRIPTION

Learn about modern police procedures as a policeman/lecturer leads you through a series of questions and mini-games about the arrest process. Up to three individuals or groups can play simultaneously on the three walls of the CAVE. If you do not get it right, the suspect will walk free on a technicality.

After a prologue in the station control room, watch video of an arrest and answer questions based on what you have seen.

Back in the station with the suspect, make sure they are processed at the desk correctly.

Design a suitable police cell for the suspect by dragging furniture from a selection of objects.

The initial interview, rearrange the statements into the correct order.

Learning Objectives

Learners will be able to:

- Learn about correct police procedure
- Appreciate the importance of attention to detail and an arrested person's rights

Sim in Crim – Youth Justice

Understanding the UK arrest procedure and what counts as evidence

Created by Dr Ben Hall & Gareth Preston

CATEGORY	Criminology, social work	System: Intuiface Include Estimated Time: Active Participant:
LOCATION		
DESCRIPTION	An adaptation of Sim In Crim – Policing with a focus on young people in the police system. Learn about modern police procedures as a detective and a lawyer lead you through a series of questions and mini-games about the arrest process. Up to three individuals or groups can play simultaneously on the three walls of the CAVE. If you do not get it right, the suspect will walk free on a technicality. After a prologue in the station control room, watch video of an arrest and answer questions about what qualifies as direct or circumstantial evidence. Back in the station with the suspect, make sure they are processed at the desk correctly. Design a suitable police cell for the suspect by dragging furniture from a selection of objects. The initial interview, rearrange the statements into the correct order. The slots will change colour when the correct statement is added.	
Learning Objectives		
Learners will be able to:		
• Learn about correct police procedure • Appreciate the importance of attention to detail and an arrested person’s rights		

Sim in Qual

Learning about qualatative data, in the style of a TV quiz show

Created by Ben Hall and Gareth Preston

CATEGORY

Sociology

System: Intuiiface

Include Estimated Time:
50 minutes

Active Participant: Class

LOCATION

DESCRIPTION

A year one introduction to qualitative data and statistics.

Inspired by the quiz show “Bullseye”, two teams or individuals choose numbers on a target (throwing a foam ball or touching a segment) and have to answer the multiple choice questions.

After 4 and 8 segment rounds, in the third round they are given a quote and have to put it into one of three categories.

The person with the highest score of the three rounds then has to decide whether or not to gamble everyone’s RISE points on a final question to score 4 times the total of points.

If they fail they are shown what they could have won (a speedboat) but no one goes home empty handed – 20 RISE points for everyone!

Requires someone to be the quiz host to move the experience along.

This format could easily be adapted for quizzes on other subjects.

Learning Objectives

Learners will be able to:

- Reinforce their knowledge of qualitative feedback analysis

Sim in Quant

Learning about quantitative data, in the style of a TV quiz show

Created by Ben Hall and Gareth Preston

CATEGORY

Sociology

System: Intuiiface

Include Estimated Time:
50 minutes

Active Participant: Class

LOCATION

DESCRIPTION

A year 3 quiz about quantitative statistical analysis, in the style of several game shows.

Quant Phrase – Guess the statistical term represented by the cartoon.

Play Your Quants Right – Will the answer to each question be higher or lower?

The Perfect Line – Be the first to put the experimental steps in the correct order.

Non-Familial Fortunes – Put the five survey answers in descending order of popularity.

The four games are linked by a background story of playing against a super quiz computer.

This format could easily be adapted for quizzes on other subjects.

Learning Objectives

Learners will be able to:

- Reinforce their knowledge of quantitative statistical analysis.

SPL3 Cardiac Arrest

Work as a team on a patient with a suspected cardiac arrest

Created by Sam Turner

CATEGORY	Emergency Response / Resuscitation	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\Documents\IntuiFace\SPL3 Full\SPL3 Full.ifx"	
DESCRIPTION	In this high-fidelity simulation, learners work as a coordinated team to manage a patient in suspected cardiac arrest. Roles include: • Team Leader • Relative Nurse • Airway Assistant • Circulation Nurse • Floating Nurse • Scribe The scenario begins with a 999 call from the patient’s wife, who is performing CPR. Learners must position themselves according to the floor plan, receive an ambulance handover, and respond to Dave’s initial rhythm. Key actions include rhythm and pulse checks, airway management, and team communication. Questions are directed to specific roles to assess decision-making and clinical response. This experience is designed to be used with actual equipment in the room.	
Learning Objectives		
Learners will be able to:		
• Perform structured cardiac arrest management as a team • Demonstrate effective communication and role clarity • Apply clinical skills in airway, circulation, and rhythm assessment • Reflect on emotional and procedural aspects through debriefing		

Storytelling

Four picture books - The Gruffalo, We Going on Bear Hunt, The Very Hungry Caterpillar, Pip and Posy: The New Friend

Created by Gener8

CATEGORY	Early Years Literacy /Emotional Developmentg	System: IntuiFace Include Estimated Time: Active Participant:
LOCATION	"C:\Users\mmu\Documents\IntuiFace\Storytelling - The Gruffalo\Storytelling - The Gruffalo.ifx"	
DESCRIPTION	This immersive storytelling experience uses four beloved picture books—<i>The Gruffalo</i>, <i>We’re Going on a Bear Hunt</i>, <i>The Very Hungry Caterpillar</i>, and <i>Pip and Posy: The New Friend</i>. Learners explore story worlds through reading, discussion, and video content, encouraging imagination, emotional awareness, and language development. The pages are turned with gestures such as tapping hotspots or swiping.	
Learning Objectives		
Learners will be able to:		
• Practice storytelling skills • Engage with stories using listening and visual skills • Identify emotions and social cues in characters • Reflect on friendship, adventure, and curiosity through storytelling		
 We’d love to hear your thoughts.  https://forms.office.com/e/uq6uVxn0Mt?origin=lprLink		

360 Videos

These videos should be opened in the **Gener8 Player** or the **Unity CAVE Video Player** to be properly displayed in the room.

3.30 The Flat

File Name	Description
Bedroom	A clean room with one bed positioned in the center. A large wall mirror is present. There are some pictures in the window.
Kitchen	A well-furnished kitchen. There are some pictures on the counter and the window, but none on the walls. the picture is not of people
Living Room	An open space connected to the kitchen, featuring a TV.

Accident Scenes

File Name	Description
Building Site.mp4	A video of a construction site. A worker is moving materials around.
City SidStreet.mp4	360° street view of Richmond Street, with people passing by.
Collapsed Wall.mp4	A house entrance wall has been intentionally collapsed. Construction is underway, and hazards are present throughout.
Forklift Truck.mp4	An accident involving a forklift. A man is on the phone, possibly related to a crushed car.

File Name	Description
Garage Explosion.mp4	A car garage with a red car airborne. Several damaged vehicles are visible, and one is emitting smoke.
Horse Riding Field.mp4	A large horse-riding field in the distance. People are riding horses, with houses nearby.
Living Room Night.mp4	A cozy living room at night. BBC is playing on the TV. No pictures on the walls, but the couch and décor are warm and inviting.
Road Traffic Collision.mp4	A car accident scene. Fire brigade has been called and is now on site. Car parts are being loaded into a damaged vehicle.
Scaffolding.mp4	A building under construction with scaffolding. A white van is parked in front, partially obscuring the view.
Small Marina.mp4	A small, windy marina. Swimming is not allowed.
Stables.mp4	Horses are eating in the stable. A chicken is walking around. The area is quiet, with workers present.
Vehicle Welding Incident.mp4	A white van is being worked on in front of a house.
Workshop.mp4	A busy workshop filled with tools and people operating heavy-duty machinery.

Cairnholy

File Name	Description
Cairnholy 1.mp4	A scene featuring ancient stones, some emerging from the ground.
Cairnholy 2.mp4	Behind them ancient stones, a stone wall has been constructed, forming a gate-like structure.

Cheshire Fire Service

File Name	Description
Bonfire.mp4	A fire has been started in a forest area. The smoke is thick and intense.
Building Site.mp4	A video of a construction site. A worker is moving materials around.
Garage.mp4	A garage connected to a house. It contains various items like a ladder and a bin.
LivingRoomNight.mp4	A video of a construction site. A worker is moving materials around.
LondonUnderground.mp4	A busy London Underground station with a ticket area and commuters.
Shopping Centre - Bombing Incident.mp4	An ambulance is present at the scene of an incident at a shopping centre with shops like KFC.
TootingBec.mp4	A London Underground station with trains arriving and departing.

File Name	Description
TrainStation.mp4	A London Underground station with trains arriving and departing.

Coastal

File Name	Description
Coastal House.mp4	A view of a house facing the coast.
Coastal Path.mp4	A path along the coast with waves crashing against rocks; a wooden gate near a house.
Craster harbour with sound fx.mov	Edited version of the above: same harbour scene with houses, boat, and people. enhanced with sound effects.

Commercial

File Name	Description
Barbers Shop.mp4	A barbershop with photos of well-groomed men on the walls, a pricing list, and a waiting area.
Building Site.mp4	A construction site with workers moving materials around.
Club Left of Stage.mp4	A dark room with intermittent lighting; people entering and exiting the room.

File Name	Description
Club Right of Stage.mp4	A dark room with red lighting; people dancing together on the dance floor.
Club Stage.mp4	A dark room with blue and white lighting; people dancing and the DJ visible from behind.
Club Toilet.mp4	A clean male toilet
Outside Club.mp4	The outside of a busy club that as construction ongoing, with a line for people with ticket trying to come in
Pet CareShop.mp4	Cluttered pet shop with food, toys, and a woman at checkout
Pub.mp4	Inside a pub with people socialising or sitting alone
Warehouse Environment busy.mp4	
Warehouse Environment messy.mp4	
Warehouse Environment quiet.mp4	
Workshop.mp4	Wood workshop with people actively working

Domestic

File Name	Description
Bedsit.mp4	A cluttered and untidy room. Bottles are scattered around, boxes are stacked on top of each other, and clothes are draped over various pieces of furniture. Posters are visible on the walls, contributing to a lived-in but disorganized atmosphere.
Collapsed Wall.mp4	The entrance wall of a house has been intentionally demolished. Construction work is ongoing, with visible hazards such as debris and exposed materials, indicating a potentially unsafe environment.
Domestic Garden.mp4	A well-maintained garden space. The area appears tidy and inviting, with trimmed grass and organized plant arrangements, suggesting regular upkeep
Flat.mp4	A cozy living space with an open kitchen extension. The television is turned on, and a bag is placed near the entrance. The room is neat, but lacks personal touches like family photos, giving it a neutral, possibly temporary feel.
Garage.mp4	A garden area with a side entrance leading into the house. A cat is seen entering through the side.
Garden.mp4	A spaces garden that a beautiful green field
Living Room Night.mp4	A nighttime living room scene. The fireplace is lit, and the television is on, creating a warm and cozy ambiance. A personal photo is visible, adding a sense of family or personal history to the space.
Treehouse.mp4	A charming treehouse setup Underneath the treehouse, a yellow toy excavator is placed, suggesting a child-friendly environment.

File Name	Description
Vehicle Welding Incident.mp4	A white van is being repaired in front of a residential house. Welding work is taking place, indicating a DIY or maintenance scenario in a domestic setting.

Emergency Care in Sports

File Name	Description
1234.mp4	A group of men standing in a circle, engaging in conversation, clapping, and cheering. The atmosphere is energetic and supportive, possibly part of a team-building or motivational session.
CoeFen.mp4	A scenic field with trees and a pathway. Cows are grazing nearby while people walk along the path, suggesting a peaceful rural setting with light activity.
Horse Riding Paddock.mp4	A horse riding field with a few individuals present. Houses are partially visible in the background, possibly obscured by trees or fencing. The scene suggests a calm equestrian environment.
Rowing.mp4	A river with several boats actively rowing back and forth. The participants appear focused, indicating a training or competitive rowing session.
Swansea FC pitch side.mp4	A football pitch with players stretching on the field. Spectators are seated in the stadium stands, suggesting a pre-match or training scenario at a professional venue.

Ethiopia

File Name	Description
360° Video Entoto Park Addis Ababa Tour - VR Ethiopia.mp4	A walk through Entoto Park in Addis Ababa , Ethiopia, captures the vibrant atmosphere of the park, where visitors are seen walking, taking photos, and enjoying the natural surroundings. With lush greenery and dedicated entertainment areas.

Forest

File Name	Description
New_Day.mp4	A midday forest scene with a visible water source. A white car passes by, suggesting a nearby road and human access.
New_Night.mp4	A nighttime forest scene. Branches are visible, and the only light comes from a nearby building, creating a dim and mysterious atmosphere.
night.MOV	A night in the forest with branches and a light from the building the only thing visible
1 Virtual Walk Through A Tropical Forest.mp4	A guided walk through a tropical forest featuring diverse tree species and dense vegetation.
2 Walking In A Dreamy Forest.mp4	A peaceful and immersive walk through a forest, evoking a dreamy and tranquil mood.
4 Middle Fork.mp4	A walk along a forest path lined with tall trees. A bridge is part of the route, adding structural interest.

File Name	Description
5 Oregon Park.mp4	A forest walk through Oregon Park, showcasing natural trails and greenery.
6 Canadian Park.mp4	A forest walk with close-up views of leaves and foliage, highlighting the texture and detail of the environment.
1 Alone Night Forest Walk.mp4	A solitary walk through the forest at night. The scene is quiet and introspective.
2 Japan Walking At Night In Aokigahara Forest.mp4	A nighttime walk along a path in Aokigahara Forest, known for its dense trees and eerie reputation.
3 Haunted Forest Aokigahara At Night.mp4	A nighttime bike ride through Aokigahara Forest. The atmosphere is dark and suspenseful.
4 Scary Forest In Sweden.mp4	A night walk in a Swedish forest using a flashlight. The scene is tense and exploratory.
5 Solo night hike.mp4	A solo night hike with narration about the hiker's experience. The forest is dark and quiet.
6 Supposedly Haunted Forest.mp4	A late-night walk through a dark forest, possibly haunted. The atmosphere is eerie and unsettling.

Health Psychology

File Name	Description
A Walk Through Dementia - at the supermarket.mp4	A simulation task where the participant is asked to pick up items in a supermarket. The experience is staged from the perspective of a mother living with dementia, accompanied by her son. It aims to reflect the cognitive and emotional challenges faced during everyday tasks.
Health psychology1.mp4	Three people are in a room observing and analysing a participant. The setting suggests a psychological or behavioural study environment.
Health psychology2.mp4	3 people in a room analysing the participant while you are in the middle

Holland

File Name	Description
Bridge complete.mp4	An empty bridge with fencing installed to prevent people from jumping. The scene is quiet and secure.
Central Station Interior.mp4	Interior of a large station with people moving through spacious walkways. The design allows for smooth pedestrian flow without congestion.

File Name	Description
Central Station.mp4	A interior of a station with people coming and going with a big spaces to do so without interrupting
Den Haag HS - Bombing Incident.mp4	A tense scene with no people present. Emergency vehicles including ambulances, cars, vans, and bikes are visible, suggesting a recent incident or evacuation.
Docks.mp4	A dock area used for transporting goods.
Erasmus Bridge.mp4	A spacious area offering a scenic view of the Erasmus Bridge. The setting is open and visually striking.
EuroMast 2.mp4	A high vantage point providing a panoramic view of the cityscape.
Motorway.mp4	A busy motorway with cars moving in both directions. An ambulance van is stopped on a separate section of the road, indicating a possible emergency.
Rotterdam Garage.mp4	A clean, well-organized garage with two levels and multiple cars. The space appears modern and efficient.
Shopping Alley.mp4	A narrow shopping alley with clothing stores. It's raining, and people are walking through with umbrellas or coats.
Shopping Centre Back.mp4	A view of buildings with varied architecture. Emergency vans, including ambulances, are parked with all vehicles facing away from the viewpoint.

File Name	Description
Shopping HighStreet 3.mp4	A busy shopping high street with people walking by, carrying shopping bags.
Shopping HighStreet.mp4	A bustling shopping street with aligned shops and people entering and exiting stores.
Shopping Street.mp4	A spacious shopping area surrounded by shops. A tram passes through, adding to the urban atmosphere.
Station Underground.mp4	An underground station where 2 out of 4 excavators are actively working. The scene suggests ongoing construction or maintenance.
Train Platform.mp4	A train platform with a road visible nearby. A train arrives and passengers board, capturing a typical transit moment.

Hospital

File Name	Description
360 Hospital.jpeg	A clean hospital room with essential medical equipment.
Bls_video_2.mp4	A woman finds a patient and checks for signs of life. She and her coworkers attempt resuscitation.
CCU_1.mp4	A small private hospital room with a sink.

File Name	Description
Doctors Office.mp4	A doctor's office equipped for patient consultations.
ICU.mp4	A hospital ward with nurses working diligently.
ICU1.mp4	A room with equipment designed to sustain a patient's life.
ICU2.mp4	A room with two large machines—one with dual screens and tubing, the other connected and movable.
ICU3.mp4	A room with baby cubicles and various equipment; people are coming in and out.
ICU4.mp4	a room with 3 nurse and some equipment being used
ICU5.mp4	
ICU6.mp4	A room with three nurses using equipment; one is on a computer, another on a landline phone.
Infant ICU.mp4	An infant ICU with specialized neonatal equipment.
Lab.mp4	A laboratory with various equipment and open space.
MaternityTheatre.mp4	Two coworkers preparing in a room filled with maternity-related equipment.
OperatingTheatre.mp4	An operating room with various machines; coworkers are preparing for surgery.

File Name	Description
Resus 2.mp4	
Resus.mp4	Advanced resuscitation bay with equipment throughout.
Resus_1.mp4	Resuscitation room with coworkers walking around the equipment.
Rotterdam ICU.mp4	Rotterdam ICU with central equipment and cupboards around.
Trauma Ward Still.mp4	A small trauma ward room with essential equipment.
Trauma Ward.mp4	A trauma ward equipped with necessary emergency care tools.
ambulance deck 2.jpg	Ambulance car park with wet floors.
Ambulance Deck.jpg	an ambulance, car park with wet floors
Emergency Resus Room.jpg	A clean emergency resuscitation room with equipment.
Hospital Canteen 2.jpg	Hospital canteen with people present.
Hospital Canteen 3.jpg	an hospital canteen with people around
Hospital Canteen.jpg	an hospital canteen with people around
Hospital Corridor 2.jpg	Hospital Corridor with information on the walls and boards

File Name	Description
Hospital Corridor.jpg	Hospital Corridor with information on the walls and boards
Hospital Entrance 2.jpg	Hospital Entrance with space cars and people
Hospital Entrance.jpg	
Hospital IT Room.jpg	Hospital IT room with clutter and boxes.
Hospital Library.jpg	Clean hospital library with people present.
Hospital meeting room.jpg	Hospital meeting room with TV, chairs, and necessary equipment.
Hospital staff wellness area.jpg	Staff wellness area with space to relax, eat, and watch TV.
Hospital Staff Wellness Area2.jpg	Another view of the staff wellness area.
interview room.jpg	Interview room with chairs and no screens.
Paeds Resus Room.jpg	Paediatric resuscitation room with equipment
patient room diff location.jpg	A hospital room with a chair and basic furnishings.
patient room.jpg	A hospital room with a chair and basic furnishings.
Second Hospital Corridor 2.jpg	A long white corridor with warning sign on the floor

File Name	Description
Second Hospital Corridor.jpg	a white corridor with window

London

File Name	Description
River Thames 2.mp4	A pedestrian pathway with buildings visible in the distance. The river runs between the walkway and the buildings, creating a scenic urban riverside view.
River Thames.mp4	River waves gently touch a rocky shoreline. The river is situated between two buildings—one with a wall featuring writing, and the other with a gate leading to the building.
Station Escalator.mp4	A station area with three escalators. Two are operational and busy, while the middle one is out of service.
Ticket Office.mp4	Train entrance area where people scan their tickets to pass through. Information boards display travel updates and schedules.
Tooting Broadway.mp4	Underground tube station where a train arrives, drops off passengers, and departs.
Trafalgar Square 2.mp4	People walking, taking photos, and sitting on the stairs in Trafalgar Square. A lively public space.
Trafalgar Square.mp4	Similar to Trafalgar Square 2.mp4, with added detail: a fountain is present, and a woman is seen skipping.

File Name	Description
Train Carriage.mp4	An empty train carriage in motion, offering a quiet and undisturbed view of the interior.

Maternity

File Name	Description
4Bed Bay.mp4	A hospital room where staff are cleaning multiple beds.
Bereavement Room.mp4	A bereavement room resembling a waiting area, with a TV turned on.
BreakRoom.mp4	A staff break room with documents and notices displayed on the wall.
Corridor.mp4	A white hospital corridor with an X-ray sign on the wall.
CT Scanner.mp4	A white hospital room containing a CT scanner; people are visible in the observation room.
Delivery Room.mp4	A hospital delivery room filled with medical equipment.
Doctors Office 2.mp4	A doctor's office with a desk and workspace setup.
Doctors Office.mp4	A doctor's office with a desk and workspace setup.
Hospital Entrance.mp4	Hospital entrance with accessible entry points.
Infant ICU.mp4	Infant ICU with toys and specialized equipment for neonatal care.

File Name	Description
Maternity Room 2.mp4	Maternity room with a privacy curtain and medical equipment.
Maternity Room.mp4	Maternity room with a closed privacy curtain.
Meeting Room.mp4	A maternity room with a closed privacy curtain.
Neonatal Ward.mp4	Neonatal ward with informational boards on the walls.
NICU.mp4	Neonatal ward with informational boards on the walls.
Paediatric Resus.mp4	Paediatric resuscitation room with advanced medical equipment.
Paediatric Room.mp4	Paediatric room with child-themed wall art and medical equipment.
Paediatric Ward 2.mp4	Paediatric ward with child-themed wall art, a bed, a chair, and a TV.
Paediatric Ward.mp4	A hospital room with beds designed for children.
Private Room.mp4	A plain hospital room with minimal furnishings.
Rotterdam ICU.mp4	ICU room in Rotterdam with heavy-duty medical machines.
Trauma Ward.mp4	Trauma ward with beds and large medical equipment.
Waiting Room.mp4	Waiting room for parents and children, featuring entertainment like cartoons and toys.
Ward_1.mp4	A view inside a section of a hospital ward.

File Name	Description
XRay originalsound.mp4	X-ray room with original sound captured during filming.

Nature

File Name	Description
Gullfoss Waterfall.mp4	A cold outdoor environment where people are viewing the Gullfoss Waterfall. The scene captures the dramatic flow of water and surrounding landscape.
Marshin Fog.mp4	A foggy marshland scene. Visibility is extremely low, with dark grey tones at the bottom and lighter grey hues at the top, creating a mysterious atmosphere.
Riverside.mp4	A riverside scene with a pathway running alongside the water. Peaceful and suitable for walking or reflection.
Snowy Lake with Floor.mp4	A snowy lake landscape with a visible floor surface and a cabin in the far distance, evoking a remote and serene winter setting.
Snowy Mountains.mp4	Snow-covered mountains with roadside signage to guide vehicles. The scene includes slopes and directional icons for safe navigation.
Strokkur Geyser with Floor.mp4	A geothermal scene featuring the Strokkur Geyser. People are present, observing the geyser erupt from a designated viewing area.

File Name	Description
Thermal Vents.mp4	A geothermal area with thermal vents and snowy mountains visible in the distance, combining heat and cold elements in one landscape.

Nick D

File Name	Description
360 Video MAC Rowing.mp4	Rowing from the perspective of the team. The viewer experiences the motion and coordination of the rowers as if part of the crew.
Surrey Basketball 360.mp4	A live Surrey basketball match. The audience is actively watching, creating a dynamic and engaging sports atmosphere.

Public Transport

File Name	Description
Aeroplane Cabin 2.mp4	Aeroplane Cabin with people talking and An airplane cabin with passengers seated and talking. The scene captures a typical in-flight atmosphere.
Aeroplane Cabin.mp4	A close-up view of an airplane cabin showing passengers seated.
London Underground.mp4	A busy London Underground station with people commuting to various destinations.

File Name	Description
Station Escalator.mp4	A station with three escalators—two are operational and busy, while the middle one is out of service. People are moving in and out of the station.
Ticket Office.mp4	Train station entrance where people scan their tickets to pass through. Information boards display travel updates.
Tooting Bec.mp4	Underground tube station where a train arrives, drops off passengers, and departs.
Train Carriage.mp4	An empty train carriage in motion, offering a quiet view of the interior.
Train Platform.mp4	A modern train platform with a motorway visible on one side.
Train Station.mp4	A quiet train station with people waiting for their trains.

Relaxing

File Name	Description
Bridge Over Lake.mp4	A bridge over a lake with people walking across during midday. The scene is calm and scenic.
Canal.mp4	A canal with a white house on one side and a pedestrian pathway on the other.
Coe Fen.mp4	A green field with a pathway and a few cows moving about. A peaceful rural setting.
Garden.mp4	A well-maintained garden with trimmed grass, organized plants, and a house in the background. The space is tidy and inviting.
Greek Beach.mp4	A rocky beach in Greece with people swimming and enjoying the water.
Hills.mp4	A hilly landscape with a house visible in the background.
Lake.mp4	A lake with a walking path alongside it, offering a tranquil natural setting.
LivingRoom Night.mp4	A cozy nighttime living room scene with a lit fireplace and TV on. A personal photo adds a homely touch.
Marina 1.mp4	A marina filled with boats, suggesting a busy waterfront area.
Marina.mp4	A marina with a pedestrian pathway for people to walk along the water.
Pier 2.mp4	A pier with seating areas and a van visible in the background.

File Name	Description
Pier.mp4	A long bridge-like pier extending over the water.
Small Marina.mp4	A small marina with canals and boats in the water.
Snowy Mountains.mp4	
Southport Beach.mp4	Southport Beach during low tide, exposing more of the shoreline.
Southport Pier.mp4	Southport Pier with the tide out and people gazing into the distance.
Spring time in Cambridge.mp4	A springtime scene in Cambridge with trees, a building, and a river.
Treehouse.mp4	A charming treehouse with a yellow toy excavator underneath, suggesting a child-friendly environment.

Social Work

File Name	Description
Bridge 1 - Compressed.mp4	A bridge located next to the Brooks Building, with cars passing underneath.
Reception 1 - Compressed.mp4	A room with cupboards, a fridge, and various household items, resembling a lived-in reception or transitional space.
Reception 2 - Compressed.mp4	A darker version of the reception room, with similar cupboards, fridge, and living items visible.

Space

File Name	Description
ISS Test.mp4	A scene set on the International Space Station (ISS), showcasing the station's interior
Mars.mp4	A visual representation or simulation of the Martian surface.
Moon.mp4	A scene depicting the Moon's surface or environment.
Moon7TARDIS.mp4	A Moon scene featuring the TARDIS (from <i>Doctor Who</i>)

The Party

File Name	Description
handbrake_the_party.mp4	A party scene viewed from the perspective of Lala, an autistic girl experiencing sensory overwhelm. She initially uses headphones for support, but her father takes them away. As more people arrive, she struggles to stay calm and fit in. The environment becomes increasingly difficult for her to enjoy. Later, she has a heartfelt conversation with her mother about how challenging social situations are for her.

Bike Rides

File Name	Description
Beach Ride.mp4	A scenic beach ride with a beautiful view. People are walking along the same path.
City Ride.mp4	Ride along a wintery city street

Z-Arts

File Name	Description
4k_classroom1.mp4	A children's classroom with toys and beautifully decorated walls designed to entertain and engage young learners.

File Name	Description
4k_classroom2.mp4	A classroom where chairs and tables are arranged around the edges, leaving open space in the center.
4k_classroom3.mp4	A children's art classroom, likely used for creative activities.
Library.mp4	A children's library designed for reading and quiet learning.
Multifunctionhall.mp4	A multi-function hall with black cotton fabric, possibly used for events or performances.
Playroom2.mp4	A children's playroom with a cool umbrella on the right and glowing decorative drops.
Art Room	Classroom dedicated to art and crafts

Online Resources

[Media library - 3D scenes - Mozaik Digital Education and Learning](#) is part of Mozaik Education, a digital learning platform that offers hundreds of interactive 3D scenes about National Curriculum subjects like:

Category	Description	Example 3D Scenes	picture
 History	Explore ancient civilizations, historical events, and famous landmarks.	Acropolis of Athens, Leonardo da Vinci's workshop, History of piracy	
 Maths	Visualize mathematical concepts and tools in action.	Geometry tools, Graph plotting, Volume and surface area of solids	
 Science	Includes Biology, Chemistry, and Physics—explore how the world works.	Human body systems, Chemical reactions, Laws of motion, Electricity	
 Geography	Learn about natural landscapes, climate, and human geography.	Volcanoes, The atmosphere, Pollution, River systems	
 Technology	Discover machines, inventions, and engineering principles.	Robotic arms, Coffee machines, Four-stroke Otto engine	
 Art	Dive into visual arts and famous artworks from different periods.	Renaissance art, Da Vinci's inventions, Sculpture techniques	

 Music	Learn about musical instruments and sound production.	Morin khuur (Mongolian instrument), The ear and hearing mechanism	
 Others	Covers extra topics like nature, animals, and everyday objects.	Olive tree, Termite mound, Domestic yak, Tea plant	

These scenes are designed to help students see, hear, and interact with the topic they're learning—making it easier to understand and remember. They often include voice-over narration, labels, self-guided walkthrough, and quizzes

How Mozaik Works in the CAVE

When you use Mozaik 3D in the CAVE:

- Pressing Alt + Enter makes the scene go full screen across all walls.
- The 3D scene fills the entire space, making it feel like you're inside the topic.
- It's great for group learning—everyone sees the same immersive content.

Using Google Earth in the CAVE

[Google Earth](https://earth.google.com/web/) works very effectively in the CAVE. You can navigate to anywhere in the world and in many cases go down to street level and virtually visit in other countries. Open Google Chrome or Microsoft Edge and go to <https://earth.google.com/web/>

Using YouTube in the CAVE

The CAVE is a 3-wall immersive projection space that can display videos across all walls—creating a surround viewing experience. Here's how to use YouTube in the CAVE:

How to Access It

1. Open Google Chrome or Microsoft Edge browser.
2. Go to YouTube <https://www.youtube.com/>

3. For an immersive video, type “360 video” + <subject> in the YouTube search bar.

What Happens Next

- If the video is a 360° video, it will play across all three walls, giving a full immersive experience.
- If the video is not 360°, it will only appear on the middle wall, and the side walls will stay black.

Tip

Look for videos labeled “360” or “VR”—these are designed to work in immersive environments like the CAVE.

Other online video platforms like [MMUTube](#) (Manchester Met’s own video platform) and Vimeo work in similar ways:

- You can stream educational content.
- If the video is designed for 360° viewing, it will fill the space.
- Standard videos will only show on the center wall.

VR HEADSET APPS

Virtual Reality (VR) is a key immersive technology used in simulation-based education at Manchester Metropolitan University. It enables students to engage in fully immersive 3D environments that replicate real-world scenarios in a safe and controlled setting.

Key Features of VR Headsets at MMU

- immersive experiences
- Realistic simulations of complex environments (e.g., hospital wards, climate displacement zones)
- Supports both individual and group learning
- Enhances empathy, decision-making, and critical thinking in high-risk scenarios

Hardware

VR Headset Comparison for MMU Simulation Use

Feature	Meta Quest 2	Meta Quest Pro	Meta Quest 3
Release Year	2020	2022	2023
Display Quality	Clear, but lower resolution	Rich colors, good contrast	Highest resolution and clarity
Processor	Snapdragon XR2 Gen 1	Snapdragon XR2+ Gen 1	Snapdragon XR2 Gen 2
Passthrough (Mixed Reality)	Basic grayscale passthrough	Full-color mixed reality	Full-color mixed reality
Eye & Face Tracking	✗ Not available	✓ Yes	✗ Not available
Battery Life	~2–3 hours	~1–2 hours	~2.2 hours

Feature	Meta Quest 2	Meta Quest Pro	Meta Quest 3
Use Case Fit for MMU	✓ Affordable for group learning	✓ Ideal for empathy & facial expression sims	✓ Best for high-fidelity environments

✓ Recommendations for MMU Use

- **Quest 2:** Great for **entry-level simulations** and **group activities**.
- **Quest Pro:** Best for **advanced simulations** involving **eye-tracking** and **facial expression**.
- **Quest 3:** Ideal for **high-fidelity environments**, **mixed reality**, and the **latest games**.

Quest 2

Quest Pro

Quest 3

How It Works

Getting Started with Your VR Headset

Adjusting the Headset

1. Turn On the Headset:

- Hold the power button on the left side for a few seconds until it powers on.

2. Fit Over Glasses:

- If you wear glasses, the headset should fit comfortably over them.

3. Adjust the Lenses:

- Slide the headset lenses side to side to achieve a clear view without blurriness.

4. Adjust the Straps:

- Tighten the straps for a snug but comfortable fit on your head.

5. Set Up Room Boundary:

- You need the controllers to set the boundary up, click on the time at the bottom of the menu, the setting comes up, and you click on boundary stationary, switch to room scale after. Follow the on-screen instructions to set up or confirm your room boundary. This helps you navigate in virtual space without bumping into objects.

6. Volume Controls:

- Locate the volume controls on the underside (front left) of the headset to adjust sound levels.

Using the Controllers

1. Wrist Straps:

- Always use the wrist straps to prevent dropping the controllers.

2. Understanding the Triggers:

- Each controller has two triggers. The index finger controller is the main button for selecting items in VR, similar to a mouse click.

3. Oculus Button:

- Use the "Oculus button" on the right controller to return to the menu. If you get stuck in an app, this button will take you back to the home screen.

The Home Screen

1. Accessing the Home Screen:

- After setting up the room boundary, you'll see the home screen with a toolbar at the bottom.

2. Open the App Library:

- Select the icon on the bottom menu to see the installed apps.

Practice with First Steps

1. Select the First Steps App:

- If this is your first time, start with the First Steps app to get comfortable with the controllers and moving around in VR.

Turning Off the Headset

1. Power Off:

- When you're done, hold the power button until you see the shutdown menu.
- Release the button and use the controller to select "Power Off."

2. Alternative Shutdown:

- Alternatively, hold down the power button for 10 seconds to turn off the headset without using the controllers.

VR Headset Booking & Support

If your issue is not immediate, consulting our support documents might provide helpful information. Elsewise, contact the Brooks Resource Centre directly and ask for VR support.

[Health and Education Resource Centre Support](#)

The VR Headsets are directly managed by the H&E Resource Centre.

If immediate support is required, the VR Headset Technical Officers can be reached by calling the Brooks Resource Centre on **0161 247 2544**

The Dalton Building also has a VR lab with 25 headsets, which can be booked for classes.

Antser VR headset

Overview

Antser's immersive VR solution includes **12 Pico headsets stored in a secure case**, designed for group use in educational and training environments such as classrooms and workshops.

Content & Topics Covered

The headsets come preloaded with real-life scenario-based 360 videos covering sensitive and impactful subjects, including:

- **Child abuse (pre-natal, baby, prepubescent)**
- **Drug misuse**
- **Knife crime**
- **Fostering**
- **Social media issues**
- **Sexual exploitation**
- **Dementia awareness**

These simulations are designed to provoke empathy, deepen understanding, and support safeguarding and wellbeing education.

Usage & Facilitation

While the headsets are **simple to operate**, teaching sessions require **careful preparation** due to the emotional and sensitive nature of the content. Facilitators are encouraged to:

- Review the content in advance
- Prepare discussion prompts and support materials
- Create a safe and respectful environment for reflection

Ideal For

- Social care and social work
- Youth services
- Safeguarding workshops
- Nursing
- Psychology

Antser can be booked on **Connect2**. Go to the General category and search “Antser”. The headsets can be booked individually, so if you need the full class set, makes sure you add all 12 to your basket.

Quick Guide to Using an Antser (Pico) Headset

1. Plug in headphones if required to the socket underneath the headset. Note that the volume button is also underneath the headset.
2. Press the power button underneath the headset. A blue LED will come on.
3. Put on the headset from the front, like a pair of glasses, and stretch the head strap over your head.
4. Wait for the headset to boot up. When it is ready you will see two buttons ahead of you labelled Offline and Online.
5. There are two ways to navigate the software:
 - a. Move the dot by moving your head. Place the dot on top of a button and you will see it turn into a spinning circle. Hold the spinning circle over the button for several seconds and this will ‘press’ the button.
 - b. Pick up the controller. Hold down the bottom button, marked with a yingyang symbol, until you see the message “Controller connected”. Use the controller like a laser pointer to point to buttons and then press the large top button on the controller to press buttons in the display.

Meta VR Apps A to Z

AI Therapist

Counselling simulation with an AI therapist

Created by Meta

CATEGORY

System Simulation / Emotional
Education / Neurodiversity Support

System: Meta App

Include Estimated Time:
45–60 minutes

Active Participant:

DESCRIPTION

Please note this is a demo only.

Participants engage with an AI therapist designed to simulate real-world counselling. The AI therapist seats the user in a virtual therapy room and initiates a guided conversation. It asks sensitive questions, responds empathetically, and helps the participant explore emotional challenges in a safe, controlled environment.

Learning Objectives

Learners will be able to:

- Participate in a simulated counselling session with an AI therapist designed for neurodiverse individuals.
- Develop emotional self-awareness through guided therapeutic dialogue.
- Practice responding to sensitive questions in a safe, immersive environment.
- Understand the emotional and psychological needs of autistic individuals in counselling contexts.

- Reflect on the role of AI in mental health support and its potential benefits and limitations.
- Evaluate the effectiveness of immersive simulations for emotional education and therapeutic training.

Autismity

Experience a simulation of autistic sensory overload

Created by Mikalus Stubna

CATEGORY	System Simulation / Neurodiversity Training / Sensory Immersion	System: Meta App Include Estimated Time: 30–45 minutes per scenario Active Participant:
DESCRIPTION	Immersive environment for individuals diagnosed with Autism Spectrum Disorder (ASD) to practice handling everyday social situations that may typically feel overwhelming. Through virtual reality, users can explore three realistic scenarios designed to build confidence and coping strategies: • Public Transport Navigate the sensory-rich experience of a busy journey,	

learning techniques to stay calm and focused amidst movement, noise, and crowds.

- **Coffee Shop**

Enter a bustling café where subtle sensory triggers—like the sound of a spoon tapping a cup or someone dragging a chair—can be challenging. Practice staying grounded and managing sensory input in a social setting.

- **Classroom**

Step into a typical school environment where a teacher is speaking, but sensory overload begins to affect a student. This scene helps users recognize and respond to internal cues of distress, such as dissociation or overwhelm.

- **Office (Meta version only)**

Start your day in a noisy office where people are arguing, the coffee grinder is loud, and a colleague is breaking your focus with his requests for PC help.

Each simulation can be repeated as often as needed, allowing users to build familiarity, reduce anxiety, and develop personalized coping strategies at their own pace.

There are two versions of this app: a PC version which requires a powerful laptop connected to a Meta Quest headset, and a Meta version which requires either a Quest Pro or Quest 3. Up to four instances of the app can be run simultaneously. If you book Autismity for your class, the Resource Centre will provide the 2 laptops.

Learning Objectives

Learners will be able to:

- Practice handling common social situations in a safe, virtual space.
- Build confidence and reduce anxiety before facing real-world challenges.
- Develop communication and coping strategies for everyday tasks.
- Experience realistic environments that support learning through repetition.
- Gain independence and emotional readiness for public and professional settings.

Bodyswaps

Talk to AI characters in business, employability, and health

Created by

CATEGORY	Immersive Learning / Soft Skills Training / Empathy Simulation / VR Education	System: Meta App Include Estimated Time: Active Participant: Yes
DESCRIPTION	Bodyswaps is a virtual reality app that helps students and professionals build communication, leadership, and workplace skills. Learners interact with virtual humans, speak using their own voice, and receive personalized AI feedback. The app includes over 30 scenarios covering interviews, teamwork, patient care, and conflict resolution. - Designed for schools, universities, healthcare, and corporate training - Includes self-reflection tools and progress tracking Please note that we currently only offer the free demo version.	

Learning Objectives

Learners will be able to:

- Practice soft skills in realistic, interactive scenarios.
- Receive AI-powered feedback to improve communication and confidence.
- Reflect on their own behavior through perspective-swapping exercises.
- Prepare for interviews, workplace challenges, and leadership roles.

Tork VR Clean Hands Care Homes

Reinforcing training about the use of hand cleanser and other PPE equipment

Created by Alt Lab

CATEGORY	Immersive Learning / Soft Skills Training	System: Meta App Include Estimated Time: 15 mins Active Participant: Yes
DESCRIPTION	Learner takes the role of a nurse in a care home. You have three patient calls to make. Carry out your tasks whilst remembering when to clean your hands, use disposable gloves, and wear a disposable apron. Tasks: Administering medicine, combing hair, taking blood pressure, changing incontinence pants, cleaning and covering a wound. Learner receives a score at the end.	
LEARNING OBJECTIVES	Learners will be able to: • Practice nursing procedures • Reinforces training about hygiene	

Tork VR Clean Hands Training for Hospital

Reinforcing training about the use of hand cleanser and other PPE equipment

Created by Alt Lab

CATEGORY	Immersive Learning / Soft Skills Training	System: Meta App Include Estimated Time: 15 mins Active Participant: Yes
DESCRIPTION	Learner takes the role of a nurse in a care home. You have three patient calls to make. Carry out your tasks whilst remembering when to clean your hands, use disposable gloves, and wear a disposable apron. Tasks: Administering medicine, combing hair, taking blood pressure, changing incontinence pants, cleaning and covering a wound. Learner receives a score at the end.	
LEARNING OBJECTIVES	Learners will be able to: • Practice nursing procedures • Reinforces training about hygiene	

Emperor

Experience the world of a partially paralysed man with aphasia following a heart attack, also the view of his adult daughter.

Created by Meta

CATEGORY

System Simulation / Narrative
VR / Neurological Awareness

System: Meta App

Include Estimated Time:

Active Participant:

DESCRIPTION

Emperor places users inside the mind of a man living with aphasia—a condition that affects the ability to speak. Through surreal visuals and emotional storytelling, users follow his daughter's journey to understand his memories and reconnect with him.

Visuals: Presented in a striking black-and-white surrealist art style, the experience visually represents the fragmented and abstract nature of the man's inner world.

Learning Objectives

Learners will be able to:

- Develop empathy for individuals living with aphasia and other communication disorders.
- Explore the emotional impact of memory loss and language barriers on family relationships.
- Reflect on the use of surrealist visual storytelling to convey psychological experiences.
- Understand how immersive media can be used to raise awareness of neurological conditions.
- Evaluate the effectiveness of narrative VR in fostering emotional engagement and understanding.

ExR

Nursing procedure training using video and VR sims

Created by ExR Education

CATEGORY

Clinical Skills Training /
Nursing Education /
Medical Simulation / VR
Healthcare

System: Meta App

Include Estimated Time:

Active Participant:

DESCRIPTION

designed to help medical professionals and students learn essential clinical skills through immersive, hands-on experiences. Founded by a **surgeon**, a **triple-A games artist**, and a **filmmaker**, ExR combines medical accuracy with engaging visuals and storytelling to create realistic training scenarios.

All content is **co-created with healthcare experts**—including NHS hospitals, universities, care facilities, and medical charities—to ensure it meets real-world training needs. The platform is **free for NHS professionals and healthcare students**, making high-quality medical VR training more accessible than ever.

ExR offers over a dozen specialty areas, including:

- Orthopaedics
- Anaesthetics & Intensive Care
- Ophthalmology
- Medical Equipment & Device Use
- General Medicine
- Core Nursing & Medical Skills
- Basic Life Support (BLS)
- Trauma & Emergency Response
- Air Ambulance Procedures
- Renal Medicine

- ENT Surgery
- Obstetrics
- Allied Health Professions
- Paediatric Emergency Skills

Learning Objectives

Learners will be able to:

- Practice clinical procedures and decision-making in realistic VR environments.
- Improve technical competencies across a wide range of medical specialties.
- Receive instant feedback and performance metrics to guide improvement.
- Access standardized, repeatable training modules without needing a facilitator.
- Benefit from free access to high-quality training content as NHS professionals or students.

First Steps

Introduction to virtual reality and how to use a Meta Quest headset

Created by Meta

CATEGORY	VR Training	System: Meta App Include Estimated Time: Active Participant:
DESCRIPTION	Discover the unique experience of entering virtual reality. This app gently introduces how to use the Quest headset, its controller and your own hands tracked by the software. It guides you through some simple challenges to learn how to look around, pick objects up, throw them, operate buttons, stack objects and combine them (such as inserting a cartridge into a game console) Finally you can play a shooting gallery game and a dance game.	
Learning Objectives Learners will be able to: • Use a Meta Quest headset and it apps confidently. • Gain an idea of how VR is different to other screen based technology		

Goliath – Playing with Reality

The story of a man with schizophrenia and his journey to being able to manage his condition
Created by Anagram

CATEGORY

System Simulation / Mental
Health Awareness / Narrative
VR

System: Meta App

Include Estimated Time:

Active Participant:

DESCRIPTION

Through mind-bending animation, GOLIATH: PLAYING WITH REALITY explores the limits of reality and a true story of so-called 'schizophrenia' and the power of gaming communities. Echo (Tilda Swinton) guides you through the many realities of Goliath, a man who spent years isolated in psychiatric institutions but finds connection in multiplayer games. Combining heartfelt dialogue, mesmerising visuals and symbolic interactions, weave through multiple worlds to uncover Goliath's poignant story.

Learning Objectives

Learners will be able to:

- Understand the lived experience of individuals diagnosed with schizophrenia.
- Explore the therapeutic potential of gaming communities for mental health and social connection.
- Reflect on the use of surreal animation and symbolic storytelling to represent psychological realities.
- Develop empathy and awareness around psychiatric isolation and recovery.
- Evaluate the role of immersive media in mental health education and advocacy.

Impulse – Playing with Reality

A game about how the brain manages risk and the story of four people with ADHD
Created by Anagram

CATEGORY

Simulation / Empathy
Training

System: Meta App
Estimated Time: 40
minutes.

Active Participant:

DESCRIPTION

Immerses users in the lived realities of individuals with ADHD. experience that immerses users in the lived realities of individuals with ADHD. The experience transforms your physical space into a dynamic, shifting environment that mirrors the chaos, creativity, and intensity of ADHD.

You'll step into four unique stories:

- **Leanne** gamifies life to escape boredom.
- **Omar** thrives in chaos and high-stakes heists.
- **Errol** adopts a madcap persona to earn respect.
- **Tara** is on the brink of giving up.

Through fast-paced challenges, sensory distortions, and symbolic interactions, *IMPULSE* offers a empathetic and educational journey.

The app has two distinct phases – a game which illustrates the theory of the dynamic interplay between brain arousal (bottom-up) and executive control (top-down) systems. The game becomes unwinnable.

This is followed by the four stories, illustrated with 3D animated scenes occurring around you. Sometimes you need to interact with the scene to continue the story.

Learning Objectives

Learners will be able to:

- Understand the diverse lived experiences of individuals with ADHD.
- Explore how ADHD affects perception, attention, and emotional regulation.
- Reflect on the social and psychological impact of being undiagnosed or misunderstood.
- Experience how MR can simulate neurodiverse realities through environmental transformation.
- Evaluate the role of immersive storytelling in mental health education and advocacy.

Lifeguard VR

Lifeguard simulation used for training by the American Red Cross

Created by American Red Cross

CATEGORY

Emergency Response /
Lifeguard Training /
Cognitive Skills / Aquatic
Safety

System: Meta App

Include Estimated Time:

Active Participant:

DESCRIPTION

This immersive VR experience, developed by the ARC Innovation Team, is designed to train future lifeguards in essential cognitive skills such as surveillance, visual scanning, and drowning identification. Traditional classroom and online methods struggle to replicate the environmental distractions and urgency of real-life lifeguarding scenarios. This simulation bridges that gap by placing users in dynamic aquatic environments where they must identify distressed swimmers and respond appropriately.

Learning Objectives

Learners will be able to:

- Practice visual scanning and surveillance techniques in simulated aquatic environments.
- Identify signs of distress and drowning in real-time scenarios.
- Understand the cognitive demands of lifeguarding beyond physical rescue skills.
- Experience environmental distractions and urgency in a safe, controlled setting.
- Evaluate their response accuracy and decision-making under pressure.

Mission ISS

Created by Magnopus

System: Meta App

CATEGORY Science

Estimated Time:
30 minutes

Active Participant: Yes

DESCRIPTION

An excellent example of the power of VR to do something a flat screen computer could not.

Take a trip into orbit and experience life on board the International Space Station. In this Emmy-nominated simulation, learn how to move and work in zero-gravity using your controllers. Dock a space capsule, take a spacewalk, and let real NASA astronauts guide you on the ISS through informative videos and images.

Learning Objectives

Learners will be able to:

- Learn more about the International Space Station and the work its crew does
- Have an impression of what it is like to work in zero gravity
- Have stronger idea of what a virtual reality app is

Manual Handling VR Quiz

Good and bad practice for manual handling, told from the point of view of a female patient.
Created by Gareth Preston & Ruth Wood

CATEGORY Nursing, Quiz, Empathy

System: Meta App

Estimated Time:
12 minutes

Active Participant:

DESCRIPTION

Feel the difference between good and bad nursing behaviour with this quiz. Watch an interaction between a female patient with limited mobility and two nurses who have come to move her out of her bed into a chair. From time to time the video pauses and the user is asked a question about what they have observed.

Learning Objectives

Learners will be able to:

- Learn the correct way to hoist someone from a bed to chair
- Think about the way health workers conduct themselves and treat their patients
- Build empathy for patients

Math World VR

Created by Skill Prepare

System: Meta App

Estimated Time:
20 minutes

CATEGORY Education

Active Participant: Yes

DESCRIPTION

Each mini game in Math World VR combines simple math that adds a fun challenge. Whether it's axe throwing, even/odds with throwing darts at balloons, or shooting a bow and arrow at the correct answer for the equation - all while helping improve your math arithmetic and exercising your brain.

Learning Objectives

Learners will be able to:

- Practise arithmetic
- Learn how games can be used to teach concepts.

Notes on Blindness

Point of view of a blind man's experience, based on a real audio diary

Created by Meta

CATEGORY	Sensory Simulation / Empathy Training / Narrative VR / Visual Impairment Awareness	System: Meta App Estimated Time: 40 minutes Active Participant:
DESCRIPTION	Based on the original audio diaries of John Hull, who became totally blind in 1983, Notes on Blindness: Into Darkness is a journey into a world beyond sight. Hull recorded his experiences on cassette tapes to make sense of his transformation, and these recordings form the foundation of this award-winning VR experience. Through spatialized sound, movement tracking, and controller interactions, users explore Hull’s memories and perceptions in a surreal, immersive environment. The experience uses binaural audio, real-time 3D animation, and poetic narration to convey the emotional and sensory dimensions of blindness	
Learning Objectives Learners will be able to: - Gain insight into what it’s like to live without sight. - Understand how sound, memory, and imagination shape perception. - Reflect on the emotional impact of losing a sense. - Build empathy for people living with visual impairments.		

TRIPP

Guided meditation

Created by TRIPP Inc

CATEGORY

Guided Meditation / Mental
Wellness / Relaxation / VR
Mindfulness

System: Meta App

Include Estimated Time:10 min

Active Participant:

DESCRIPTION

Please note that we currently only offer the free demo version.
A guided meditation session in which the participant is
narrated through a dreamlike landscape. The mediation lasts
approximately 10 minutes.

Learning Objectives

Learners will be able to:

- Achieve relaxation
- Critically analyse how effective this kind of VR experience is compared to other methods.

We Live Here

The story of a homeless woman, told through exploring her tent

Created by Rose Troche

CATEGORY

Empathy Training / Social Justice
/ Narrative Simulation /
Homelessness Awareness

System: Meta App

Include Estimated Time: 15-20
min

Active Participant:

DESCRIPTION

Rockey lives in a tent in a park. We meet her on the day police and sanitation workers come to clear the park of the homeless people seeking shelter there. Rockey flees, unable to salvage her personal belongings. Through interactivity, explore Rockey's personal objects, objects that hold Rockey's memories and illustrate her past. Pick up her journal to reveal an animated poem, the story of the first homeless man Rockey saw when she was ten. Find a small wooden box filled with Rockey's photos. Wind up a music box to hear Rockey's dream of having a home again. Pick up a small cut out of a motorcycle and open up a psychedelic animation telling the story of the day Rockey got married on the back of a motorcycle on her way to Sturges. Finally, a novel from Rockey's childhood opens to reveal an animation of Rockey's last desire - to be a cowboy.

Learning Objectives

Learners will be able to:

- Understand the personal impact of homelessness through immersive storytelling.
- Explore how everyday objects can hold deep emotional meaning and memory.
- Reflect on the social and emotional challenges faced by unhoused individuals.
- Build empathy and awareness through interactive narrative experiences.
- Recognize the power of VR in telling human-centered stories.

YouTube VR

YouTube with the ability to show immersive videos

Created by Meta

CATEGORY

Immersive Media Consumption,
Interactive Video Platforms, VR
Content Browsing

System: Meta App

Include Estimated Time:

Active Participant:

DESCRIPTION

YouTube VR brings the full YouTube experience into virtual reality, allowing users to watch **360° videos**, **VR content**, and standard videos in an immersive environment. Users can explore a wide range of educational, entertainment, and experiential content in a virtual cinema-style setting.

Learning Objectives

Learners will be able to:

- Explore immersive video content for education, training, or entertainment.
- Experience 360° environments to enhance spatial awareness and engagement.
- Use VR as a tool for visual learning and media consumption.
